Abstract of **JP 2003037836 (A)**

PROBLEM TO BE SOLVED: To provide a picture distribution method which provides various information for users at user terminals. SOLUTION: A real-time moving picture distribution server 109 collects moving pictures photographed by video cameras 105, 106, 107, converts them into their respective streaming data, and distributes the data. Moving pictures from each video camera are transmitted to a picture-numerical value conversion server 110 via the moving picture distribution server 109 over a LAN 104. A portable telephone 102 is connected to a desired server over an internet 100 via a router 103 to read pictures provided by this server.
